EDUCATION

New York University — *Expected May 2028*
Bachelor's Degree in Data Science — GPA: 3.722

- **Relevant Coursework:** Data Structures, Data Management, Probability and Statistics, Behavioral Statistics
- **Programs & Awards:** Presidential Honors Scholar (24F, 25S, 25F), Dean's List (24F, 25S, 25F)
- **Organizations:** Data Science Club, Grow with Google (Data Analytics Program), LIKELION US Data Team

PROFESSIONAL EXPERIENCE

National Cancer Center Korea — **Goyang, KR**
Cancer Screening Division Research Intern — *June 2026 - Current*

- Designed a **retrospective gastric cancer cohort study** to evaluate predictors of advanced-stage diagnosis using screening history, insurance status, socioeconomic factors, and Charlson-derived comorbidity categories.
- Built a **Python-based simulation pipeline** to benchmark logistic regression, random forest, and XGBoost models on runtime, memory usage, and feasibility, with planned **SHAP analysis** for interpretable model outputs.
- Planned post-diagnosis survival analysis using **Kaplan-Meier curves and Cox proportional hazards models** to assess mortality risk by cancer stage while adjusting for demographic and comorbidity covariates.

Furniture Smart — **Seoul, KR**
Data Automation Intern — *April 2026 - June 2026*

- Built a **Python/Streamlit** tool to convert Naver SmartStore exports into standardized delivery-ready Excel files, reducing processing time by **83%**.
- Designed rule-based **ETL workflows** for bundled orders, add-on options, quantity expansion, duplicate handling, and validation checks.
- Automated elevator lookup with a **public-data API** and created a **Streamlit dashboard** to track settlement revenue, order channels, and top-selling products.

Seoul National University — **Seoul, KR**
Undergraduate Data Science Research Intern — *June 2025 - August 2025*

- Processed **200K+ longitudinal clinical records** using MICE imputation and patient-level data restructuring to prepare reliable datasets for Alzheimer's risk modeling.
- Developed predictive and survival analysis models, including **Logistic Regression, DNN, and Cox Regression**, to identify risk factors and compare disease progression patterns across age groups.

PROJECTS

GLP-1 Medicare Pharmacy Analytics — *May 2026 – June 2026*

- Built a Python ETL pipeline using the **CMS Medicare Part D Prescribers API** to extract and checkpoint **349K+ GLP-1 and incretin therapy prescription records**.
- Standardized brand, generic, and drug-class mappings; engineered cost and utilization metrics including **cost per claim, cost per 30-day fill, and claims per beneficiary** for Power BI analysis.

Apple Health Personal Dashboard — *April 2026*

- Built a privacy-centered **Streamlit dashboard** that parses local Apple Health ZIP exports and visualizes **up to 5 years** of activity, workout, and heart-rate trends.
- Added **30-day, 90-day, and full-history** import options to support refreshable personal health analytics without cloud storage.

EXTRACURRICULAR & LEADERSHIP

NYU LIKELION US — **New York, NY**
Member of Data Team — *August 2025 - Current*

- Participated in an ideaton to develop a student–professor connection platform with **resume-based email customization** and AI-agent features for event hosting.

KISO NYU — **New York, NY**
Executive Member — *January 2024 - Current*

- Organized cultural exchange and networking events, including a **50+ attendee event** with students and industry professionals.

SKILLS

- **Programming & Tools:** Python (Pandas, NumPy, Seaborn, Scikit-learn), PyTorch, SQL, Tableau, Power BI
- **Methods:** Classification (Logistic Regression, MLP, DNN), Survival Analysis, Cox Proportional Hazards, Kaplan-Meier Analysis
- **Languages:** English, Korean
