PROFESSIONAL EXPERIENCE

Seoul National University

Seoul, KR

Undergraduate Data Science Research Intern

June 2025 - August 2025

- Processed 200K+ longitudinal clinical records using MICE imputation to enable reliable predictive modeling.
- Built a deep neural network as a baseline nonlinear classifier, achieving 0.89 recall and 0.72 precision via class reweighting
- Built a time-series LSTM classification model using 10-visit sequences, improving recall by 8% (0.61 → 0.69)
- Used Cox proportional hazards models with Kaplan-Meier analysis to identify key Alzheimer's risk factors and compare age-group survival differences (C-index: 0.76)

Gachon University

Seoul, KR

Data Science Research Intern

June 2023 - September 2023

- Analyzed CDC BRFSS 2015 survey data to model diabetes risk using demographic, health, and lifestyle features
- Built a logistic regression baseline model achieving 0.77 recall and 0.74 precision, prioritizing interpretability for public health screening
- Improved sensitivity to 0.82 recall with an MLP classifier to better identify high-risk individuals
- Identified high blood pressure and self-reported health status as key predictors, with lower income and education levels associated with higher diabetes risk

PROJECTS

Automated Financial News Pipeline

February 2026 – March 2026

- Automated extraction of 10 daily stock-focused financial news articles by developing a Python pipeline with News API integration
- Improved content recency to 1–2 days old by applying time-based filtering and relevance ranking to financial news data
- Reduced compute time to about 3 minutes per day by scheduling weekday pipeline execution with Windows Task Scheduler
- Enabled reliable daily news delivery and archival by implementing automated logging, file saving, and email distribution workflows

PlayerNeeded

October 2025 – November 2025

- Designed a WAR-based replacement framework enforcing $\leq 70\%$ salary and $\geq 80\%$ WAR retention to identify 3 actionable roster optimization opportunities
- Conducted age-value efficiency analysis using salary-to-WAR ratios, identifying early-prime players as the most cost-effective group
- Evaluated Linear Regression, Ridge, Random Forest, and XGBoost models, selecting Ridge regression as the final salary predictor based on out-of-sample R^2
- Executed position-level replacement optimization to identify \$52.35M in potential payroll savings with a projected +2.90 team WAR improvement

EXTRACURRICULAR & LEADERSHIP

NYU LIKELION US

New York, NY

Member of Data Team

August 2025 - Current

- Participated in weekly SQL discussion sessions to review problem-solving approaches and identify optimal techniques for each scenario
- Participated in an ideaton (Hosting Event Platform) to plan incorporating AI agent with scheduling and recommendation logic

KISO NYU

New York, NY

Executive Member

January 2024 - Current

- Organized cultural exchange events highlighting Korean culture and enhancing student community engagement
- Led a networking event with 50+ students and industry professionals to foster career-oriented connections

SKILLS

- Python (Pandas, NumPy, Seaborn, Scikit-learn), PyTorch, SQL, Time Series Forecasting (LSTM), Classification (Logistic Regression, MLP, DNN), Tableau, Power BI, Korean

EDUCATION

New York University

Expected May 2028

Bachelor's Degree in Data Science

GPA: 3.722

- **Relevant Coursework:** Data Structures, Data Management and Analysis, Linear Algebra, Probability and Statistics, Statistics for Behavior Science
- **Programs & Awards:** Presidential Honors Scholar (24F, 25S, 25F), Dean's List (24F, 25S, 25F)
- **Organizations:** Data Science Club, Grow with Google (Data analytics program), Like Lion (Data Team)
